English (B2)

Education

2022-2025 Event Horizon School

Game Programming Diploma

School year 2018/2019

Diploma in computer science and

telecommunications

ITCS Erasmo da Rotterdam – Bollate (Mi)

Selected Projects

SmashTank - Mobile Video Trailer : <https://youtu.be/0xrzIB160Rk> May. 2026 - Present

Multiplayer Tank Arena PvP | Unity Engine (C#)

Developed the full gameplay, multiplayer and backend systems.

- Built the multiplayer architecture using Unity Netcode.
- Developed server-authoritative combat, damage and respawn systems.
- Created tank movement, turret aiming and shooting mechanics.
- Implemented modular active and passive ability systems.
- Built tank, bullet and equipment progression systems.
- Integrated PlayFab authentication, cloud saves and player data.
- Developed matchmaking, rewards and persistent progression systems.
- Created mobile UI, inventory, upgrades and customization systems.

The Negative Edge - AI/Gameplay Programmer

Nov. 2024 - May.2026

Third-person Arena Shooter | Unreal Engine (C++)

Developed the complete enemy AI architecture and combat behavior system.

- Designed modular enemy base classes and reusable AI controllers.
- Implemented four distinct enemy archetypes with unique combat behaviors..
- Built a scalable wave system with progressive difficulty management.
- Developed attack scheduling to coordinate enemies and prevent unfair overlaps.
- Created a custom EQS-based system for positioning, movement, and combat decisions.

LGUEDK

Nov. 2024 - Present

My Unreal Engine 5 Framework (C++)

Personal modular C++ framework designed to accelerate Unreal Engine 5 game development.

- Built reusable gameplay systems with a modular, plugin-oriented architecture.
- Created extensible C++ base classes designed for rapid project integration.
- Structured the framework for reuse across multiple Unreal Engine projects.

Lobby System - Network Programmer / Solo Developer

May. 2025 - June.2025

Multiplayer Infrastructure | Unity Engine (C#)

Developed a complete multiplayer lobby and session infrastructure in Unity.

- Built public and private lobby systems with real-time matchmaking.
- Implemented player synchronization using Unity Netcode for GameObjects.
- Developed automatic host migration and resilient session management.
- Integrated Unity Lobby and Relay services for online connectivity.
- Created persistent moderation tools including player ban and kick systems.

DragonBoss - AI & Gameplay Programmer

April.2025 - June.2025

Action-RPG Boss Fight | Unreal Engine(C++)

Developed a modular multi-phase boss AI for an action RPG encounter.

- Designed dynamic ground and aerial combat states.
- Built a modular combo-based attack selection system.
- Developed custom Behavior Tree tasks, services, and decorators in C++.
- Implemented perception, investigation, and adaptive target-selection logic.
- Integrated data-driven attacks with animation, VFX, and gameplay events.

Jules - Gameplay Programmer

January. 2024 - July.2024

Puzzle Adventure | Unreal Engine(Blueprints)

Developed core gameplay systems and environmental interactions for a puzzle-adventure game.

- Built the Gauntlet system and light-driven puzzle mechanics.
- Developed interactive gameplay objects including altars, doors, and platforms.
- Implemented health, damage, save/load, and progression systems.
- Created gameplay-driven camera feedback, VFX, and animated transitions.
- Developed UI, menus, and configurable player settings.

Other experience

Live-in Babysitter (Au Pair) - Boston, MA, USA

- living and working in the United States.
- Strengthened communication, adaptability, and interpersonal skills in an international environment.
